

-  **Stethoscopic form**
-  **Autonomy 8h**
-  **Ultralight**

The **RY-IL-CASQUE** is a magnetic induction loop receiver which can receive signals from magnetic induction loop installations. This applies to ear prosthesis on position « T ».

Its stethoscopic ultralight format makes its use easy. It is mostly convenient for places of worship, conference rooms and all places fitted with induction loop.

Features

Sound frequency transmission range	70-5400 Hz
